

Julie Fei-Fan Balzer

Can't seem to find the perfect earrings to go with your outfit for the weekend? Have no fear. Creating your own jewelry is easier than ever before with the ScanNCut machine from Brother!

MATERIALS:

Brother ScanNCut machine, quilters template material, markers, metallic ink, rolling stamp, hole puncher, earring hooks

step 1.

We're going to use the leftover bits from having cut a stencil design. One of the great things about the Brother ScanNCut machine is that you always get two perfect pieces – a positive and a negative – whenever you cut something out.

step 2.

Color the leaf shapes with markers that will write on a slick surface like the stencil film. I used four different colors.

step 3.

Use silver metallic ink and a rolling stamp to stamp a dot pattern onto the leaves. Be sure to let the ink dry before going on to the next step.

step 4.

Punch a hole in each of the leaves. Use the smallest hole punch you have.

step 5.

Insert an earring hook through each of the holes. That's it! You have a fabulous new pair of earrings!

This project was created from the designer's perspective.
