Print effortlessly with native Universal Print support on Brother printers

Streamline the way you print and manage print without the need for on-premise print servers or installation of printer drivers on Brother devices.
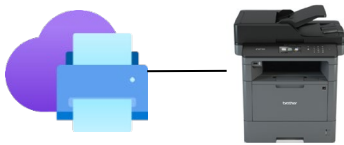

The Microsoft Universal Print solution is offered on select Brother devices to help users manage their print infrastructure through cloud services from Microsoft. These Brother printers are Universal Print ready with Universal Print compatible firmware, which provides native support to Universal Print.

With a required Microsoft M365 subscription, users can access the Universal Print console on Brother devices without the "Universal Print Connector" to:
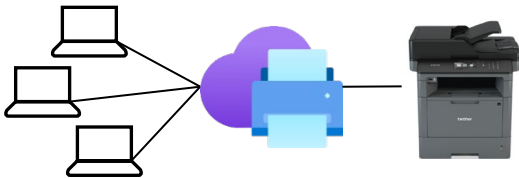

- Monitor printer status, configurations, and availability
- See who's using the Brother printers and how much they're printing
- Configure user permissions
- Print to the cloud and "pull" a print job to whichever printing device is most convenient

With cloud-based Microsoft Universal Print support on Brother devices, eliminate the need for on-premise print servers and lower capital expenditure. Also help reduce the operating expenses associated with on-premise servers, lower energy costs, and reduce the IT administrative burden.

Works with Universal Print

1. Register your Brother machine with Universal Print

2. Share the printer to users through the Universal Print portal.

Print to office from home

Print from home to a device at the office for others to retrieve the print job. Home users can print using Universal Print just as if they were sitting in the office.

Print to home from home (with corporate processes and security)

Via Universal Print, enable tracking and accountability for all print jobs printed on the printer.

Print to / from anywhere

Someone sitting in the office can print to the home-office printer for the remote worker's convenience.

About Universal Print by Microsoft

Universal Print is a modern print solution that organizations can use to manage their print infrastructure through cloud services from Microsoft. Universal Print runs entirely on Microsoft Azure. When it's deployed with Universal Print–compatible printers, it doesn't require any on-premises infrastructure. Universal Print is a Microsoft 365 subscription-based service that organizations use to centralize print management through the Universal Print portal.

About Brother International Corporation

Brother is a leading provider of office equipment technology and document management solutions, including award-winning color and black and white multifunctional printers, scanners, label printers and device-based cloud and mobile technologies.
